## Kudos From A Recent Graduate

Hello Alex and Larry,

I wanted to express my gratitude to you and the folks at WATR for ensuring my success today. Alex, I learned so much in your class, and Larry, I think the way this program was set up was fantastic. I am already recommending it to everyone I know that isn't in a career, and feel that it has made all the difference for me in my employment situation this year. It was really surreal to surprise interviewers with a list of skills as long as the one I brought into the interview today. I wanted to make sure they knew that you guys weren't fooling around at the training center, and went ahead and made them listen to the list in its entirety. Needless to say, their eyebrows went up pretty high, and one of the interviewers said, "Well, I'm already blown away!" I had an extremely positive experience with you, and would like to thank you for setting up this program exactly at the right time. If I can be of any help in promoting the school, please let me know, as I would be more than happy to. Again, thank you very much and I look forward to seeing you all again sometime.

Sincerely,  
Katharine Huey

”

Edmonds Community College Business Training Center is excited to partner with I 80 Skills in developing six online technical certificate programs for students seeking careers in the aerospace industry. I 80 Skills an online content development company located at the Purdue Technology Center in Indianapolis, Indiana.

“Online technical education allows students to progress at their own pace. Technical education is about mastery of skills, not time spent in a classroom” says Joe Kitterman, founder of I 80. “People learn in different ways at different speeds. Self-paced learning allows advanced learners to speed through or bypass instruction that is redundant, and novices can slow their own progress through content. Giving the students the time they need to attain mastery makes sure no one is left behind.”

“We are thrilled to be a part of this program and to have a chance to impact the lives of students in Washington State” said Kitterman. “We are changing the manner in which technical education is delivered to students who need to master complex equipment, devices and processes. We accomplish this by designing, developing and delivering high-performance, interactive web-based education in partnership with Edmonds Community College.”
